

San Antonio Texas, May 11, 2004

Dear Sebastien,

We have been using LABsys for over a year now. We acquired Contek's Soils and Aggregate and Concrete modules to follow and optimize both our aggregate blends and concrete mix designs. The advanced statistical tools and prompt service has enabled us to get an overall view of our production and control our costs more efficiently.

Contek's team has helped us save precious time by simplifying and accelerating the administrative process of reporting and managing test results, allowing us to get a real handle on the performance of our materials and greatly improve our QC/QA and materials management.
