

Construction Materials

Atlanta, Georgia, February 10, 2004

To whom it may concern:

We have been using Labsys from Contek for 1 year now. It is a North America wide system used by Lafarge Inc. to control its mix design database and produce statistical reports. Our quality control department uses the system in the design, field services, sales and the laboratory environment. We currently use Labsys to control design and material requirements for 120 ready mix plants in the SE Region.

Contek have been extremely helpful when it came to introducing the system into the SE region which was formerly the Blue Circle Group before the acquisition. Transferring past data quickly and efficiently with a minimum of disruption into a usable, clear format. Reports were created for the local market so the engineers in our market were happy to see more available information from us. Contek's ability to interact with other ready mix QA instruments like Command and Aceco batching panels has been remarkable.

Any problem/bug solving and improvements are quickly completed in an efficient manner. All personnel at Contek have been friendly, knowledgeable and personable towards all my colleagues and myself. Labsys since its installation have saved my team hours of work per day, reducing my overhead costs and overtime payments.

It has been a real pleasure to install Labsys and work with the people at Contek. I would recommend them and their product to anyone looking for a proven software solution for quality control.

LAFARGE SOUTH EAST REGION.
